DETAILED ACTION

Response to Arguments

1. The Applicants argue that, with respect to Claims 1, 9, 17, and 27, Barton et al. in view of Hansen et al. fails to teach or reasonably suggest a lamellar diffraction grating including an average grating period a that corresponds to a line density $1/a$ between 700 and 1100 mm^{-1} , wherein an average height h and an average width w of the protrusions is such that h/a is between 0.84 and 0.96 and w/a is between 0.22 and 0.3. The Applicants further argue that no motivation exists to combine the teachings of Barton et al. with the teachings to Hansen et al. After a review of the Applicants' remarks (See in particular Pages 5-6 of submission filed 12/10/03), the Examiner agrees, and respectfully withdraws the rejections in Section 6-7 of Paper No. 7, dated 11/5/03.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

Claims 1, 9, 17, and 27 are allowable over the cited art of record for at least the reason that the cited art of record fails to teach or reasonably suggest a lamellar diffraction grating including an average grating period a that corresponds to a line density $1/a$ between 700 and 1100 mm^{-1} , wherein an average height h and an average width w of the protrusions is such that h/a is between 0.84 and 0.96 and w/a is between 0.22 and 0.3.

Claims 2, 4, 8, 10, 12, 16, 18, and 28 are dependent on Claims 1, 9, 17, and 27, and hence are allowable for the same reasons that Claims 1, 9, 17, and 27 are allowable.

Art Unit: 2872

Holm et al. (U.S. Patent Application Publication US2002/0135876A1) is being cited to evidence a lamellar transmission grating usable in the C-band telecommunications wavelength band (See in particular Figures 1-2, 4-5, 8-12; Paragraph 0029, 0040). Holm et al. additionally discloses a substrate (See for example 204 in Figure 2); and an arrangement of generally rectangular protrusions (See for example grating 206 in Figure 2) spaced along the substrate at an average grating period a that corresponds to a line density $1/a$ between 700 and 1100 mm^{-1} (See paragraph 0029), wherein an average height h and an average width w of the protrusions (See paragraphs 0052-0053) is such that h/a is between 0.84 and 0.96 (See paragraph 0054, where the depth of the grating protrusions is disclosed to be in the range 1.5 to 10 μm), and w/a (or the duty cycle) is approximately 0.5 (See paragraph 0052, 0071, 0072). However, no teaching is present to adjust the duty cycle of the grating protrusions such that the duty cycle lies in the range 0.22-0.3, and the cited art of record does not provide any motivation to make such an adjustment in the duty cycle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
